
17 medtech companies interested in working with overseas companies.

LLC «NORD Medical»

Product description: Design and construction of manufacturing facilities (sterile medical devices, dietary supplements, cosmetics, feed additives). Preparation of feasibility studies, determination of the extent of localisation, registration, and preparation for inspection. Acting as the manufacturer's authorised representative within the Russian Federation.

Website: www.nordmedical.pro

Problems addressed:

- Helps manufacturers to launch or modernise 'turnkey' production facilities.
- Provides services relating to setting up a company in the Russian Federation, certification, clinical trials and other regulatory matters.
- Resolves legal and regulatory issues, including foreign trade contracts.
- Ensures preparation for regulatory inspections.

Advantages:

- A team with expertise in engineering, law and regulatory affairs.
- Product readiness for various tasks — from 60 to 100 per cent.
- Its own engineering centre and laboratory in Moscow.
- Can act as the manufacturer's authorised representative in the Russian Federation.

LLC «Visionero»

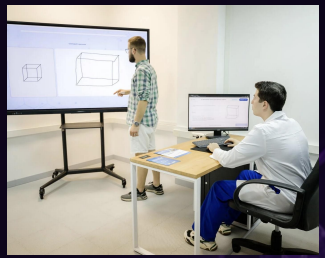

Product description: An interactive hardware and software system for rehabilitation, diagnosis and analysis of a patient's condition, featuring a range of therapeutic exercises, cognitive assessment functions and a user-friendly personal dashboard for specialists. A domestically developed system based on Russian software, created under the supervision of leading rehabilitation specialists. Intended for medical organisations and social and medical institutions.

Website: https://visionero.ru/cognitive

Problems addressed:

- The after-effects of acute cerebrovascular accidents affecting motor and cognitive functions
- The consequences of trauma and damage to the central and peripheral nervous systems, resulting in motor and cognitive impairments
- Neuromuscular disorders of any aetiology
- Cognitive deficits of any aetiology
- Musculoskeletal disorders involving restricted range of motion in the joints and asymmetrical movement patterns
- Training in physical and daily living skills, including spatial orientation, and increasing motivation
- Disturbances in the psycho-emotional state

Advantages:

- Proven, proprietary methods and effective results
- Exclusive terms for local distributors
- Find out more about the results, methods and testimonials on the website

LLC «VIT MEDICAL»

Product description: A domestic manufacturer of negative pressure devices for the treatment of all types of wounds. Product range: VIT Ultra, VIT Mobil Plus, VIT Mini (vacuum and vacuum-instillation therapy). The company was founded in 2017; its products are manufactured in large batches and are used in leading clinics, federal hospitals and in extreme medical settings.

Website: vit-medical.com

Problems addressed:

- Accelerates healing and reduces the risk of infections and amputations.
- Reduces the frequency of dressing changes and the need for daily visits to the doctor.
- Provides objective monitoring of the healing process thanks to built-in sensors.

Advantages:

- 3–4 times more effective than traditional dressings.
- Enables outpatient and home treatment with remote monitoring.
- A full range of equipment — from operating theatres to field conditions.

LLC «MENORA-MED»

Product description: Intended for covering damaged skin (abrasions, ulcers, wounds, burns, pressure sores, grazes) during self-care and mutual care, and for preventing the growth of microorganisms prior to initial surgical treatment of the skin. The medical dressing protects damaged skin from external contamination, secondary microbial contamination and adverse environmental effects, and prevents secondary trauma.

Website: https://skinolax.ru/?ysclid=mt9t0iodka119150862

Problems addressed:

- Covers damaged skin (abrasions, ulcers, wounds, burns, pressure sores, grazes) prior to primary surgical preparation.
- Prevents the growth of microorganisms and secondary microbial contamination.
- Protects the wound from external contamination and adverse environmental factors.
- Prevents secondary trauma to the wound.
- Enables pain-free dressing changes without damaging healing tissue.

Advantages:

- Faster healing.
- Can be used in situations where dressings and bandages are difficult to apply.
- High bactericidal properties — sterile upon application.

LLC «AIRONIC»

Product description: An innovative breathing trainer developed using space technology and physiology. A system for restoring healthy breathing which, through hypoxic-hypercapnic training, enriches the body with carbon dioxide, improving oxygen delivery to organs, muscles and tissues. Developed using the technology of the ‘Samozdrav’ medical trainer, which has been used in therapy for over 25 years.

Website: https://www.aironic.health/

What problems it solves:

- Reduces stress and anxiety levels, and stabilises the nervous system.
- Improves sleep quality — 95 per cent of users report a positive effect.
- Boosts stamina, energy and productivity.
- Restores physiologically correct breathing and relieves bronchospasm.

Benefits:

- Improves the functioning of three systems simultaneously: the cardiovascular, respiratory and nervous systems.
- Suitable for athletes, people under stress and anyone leading a healthy lifestyle.
- Completely physiological: it uses only the carbon dioxide you breathe out, so an overdose is impossible.
- Recommended for adults and young athletes aged 14 and over.

LLC «GalaPsy»

Product description: A hardware and software VR platform for psychological rehabilitation. It incorporates scientifically validated methods, including EMDR. It automates the delivery of therapy, improves access to care and reduces the workload on specialists. Suitable for the medical sector, education, business and private users.

Website: https://vr-psy.ru/

Problems addressed:

· This is a ready-to-use solution that replaces or complements the work of a psychologist

Advantages:

· Full automation of psychological techniques, including EMDR.

· Improves access to care — VR sessions can be conducted remotely.

· Reduces the time and cost of therapy for organisations.

· A ready-made solution for clinics, schools, corporations and home use.

LLC «IQDOC»

Product description: IQDOC AI is a medical AI navigator for doctors. The system, based on RAG (Retrieval-Augmented Generation) technology, searches for answers to clinical questions in a constantly updated database of clinical guidelines, medical orders and regulations issued by the Ministry of Health. It generates answers exclusively from verified sources, with mandatory links to the original sources. Launched on 26 January 2026, it attracted over 14,000 users within three months.

Website: https://iqdoc.ai/

Problems addressed:

- Saves doctors' time — instant access to up-to-date clinical guidelines without having to read multi-page PDFs.
- Reduces the risk of errors and AI 'hallucinations' — answers are sourced exclusively from official sources.
- Assists with complex clinical cases where there are no direct clinical guidelines for certain conditions — the system provides answers by referencing related documents.

Advantages:

- Wide reach amongst healthcare professionals
- Ability to quickly communicate information about a new product to doctors
- Regular database updates
- Ability to reach a broad potential target audience in a short time and achieve extensive regional coverage

LLC «OXYTERRA»

Product description: A Russian manufacturer of the OXYTERRA medical device for producing hypoxic, hyperoxic and normoxic gas mixtures. The equipment is designed for intermittent hypoxic-hyperoxic therapy (IHT) — a non-pharmacological method of health improvement at the cellular level. The device is available in over 200 health resorts across Russia and has been awarded a gold medal at the St Petersburg International Health Forum. It is registered with Roszdravnadzor (Registration No. RZN 2023/21861 dated 29 December 2023).

Website: https://oxyterra.ru/

Conditions addressed:

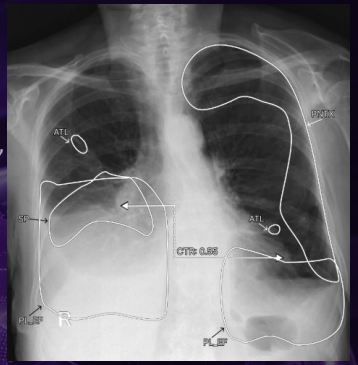

- Chronic conditions of the respiratory, cardiovascular and nervous systems.
- Reduced stamina, a slow metabolism, sleep disturbances and a weakened immune system.
- The need for disease prevention and recovery following illness.
- Limited access to natural therapies (mountain climate, hyperbaric chambers).

Advantages:

- The device generates gas mixtures itself — no cylinders or expensive consumables are required.
- Biofeedback: automatic adjustment to the patient's heart rate and oxygen saturation.
- The world's first IGT device capable of modifying the protocol directly during the procedure.
- High flow rate (25–50 l/min) and 4 operating modes.
- In-house technical support.

LLC «TOP»

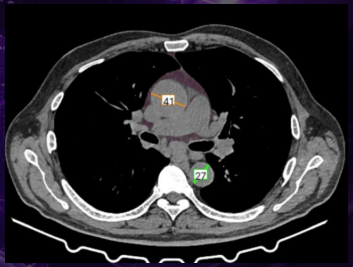

Product description

The **Third Opinion Platform** is developing a unified digital healthcare ecosystem for medical organizations, physicians, and regional healthcare systems.

The platform is based on unified digital infrastructure that helps integrate clinical, operational, and digital processes; connect AI-powered services; manage data flows; build analytics; and improve the digital maturity of healthcare organizations.

Website: https://thirdopinion.ai/

Problems addressed

- Helps healthcare organizations integrate fragmented digital systems and data into a unified infrastructure.
- Improves diagnostic quality through the automatic prioritization of examinations and AI-assisted analysis.
- Reduces physicians' workload and the risk of errors when interpreting medical imaging studies.
- Ensures quality control of medical reports and compliance with clinical guidelines.
- Enables regional healthcare authorities to manage healthcare systems based on data and monitor patient safety.

Advantages

- Flexible terms of cooperation and the ability to adapt the solution to the customer's requirements.
- Experience with AI-powered services and medical imaging, as well as the ability to integrate the platform with regional healthcare services in other countries.
- Prompt resolution of integration and product customization issues.
- Existing connected medical institutions where potential customers can view the platform in operation.
- Short implementation timelines.

JSC «PC ALMATEK»

Product description: A portable TLNS device for translingual neurostimulation. The technology provides non-invasive stimulation of the brainstem and cerebellum through the tongue to promote neuroplasticity.
The device is designed to support the recovery of movement, balance, and coordination in people with neurological disorders, including cerebral palsy, traumatic brain injuries, multiple sclerosis, stroke, Parkinson's disease, and vestibular disorders. It can also be used as part of home-based rehabilitation programs.
Websites: https://www.4stim.com/, https://www.rehaline.ru/, https://www.r-kids.ru/

Problems addressed:
• Supports the restoration of motor functions, balance, and coordination in patients recovering from strokes and traumatic brain injuries, as well as in people with other neurological disorders.
• Provides a more accessible alternative to foreign products, such as Canadian PoNS systems.
• Offers a comprehensive solution that includes the device, access to a clinical base, training, and application protocols.

Advantages:
• Positive effects may become noticeable after just two or three sessions, enabling relatively rapid results.
• An in-house evidence base developed through clinical practice in Russia and Uzbekistan.
• Convenient to use and supported by evidence of effectiveness.
• Proprietary scientific and technological development.

LLC “DNA-Technology”

Product description: Equipment, software, and reagents for real-time PCR diagnostics. DNA-Technology manufactures the core equipment required for all stages of polymerase chain reaction (PCR) testing, including sample preparation, amplification, and detection.
DNA-Technology instruments are used in clinics and molecular biology laboratories around the world, including in the CIS countries, Australia, China, France, Italy, the United Arab Emirates, and other markets. The company’s products are included in the list of domestically manufactured medical equipment recommended for the procurement and outfitting of PCR laboratories as part of the healthcare modernization programs implemented in Russian regions.
Website: https://dna-technology.com

Problems addressed:
• Provides laboratories and clinics with a complete PCR diagnostic workflow, from sample preparation to result interpretation.
• Meets the needs of a broad range of diagnostic applications, including infectious diseases, genetics, oncology biomarkers, neonatal screening, and microbiota analysis.
• Offers domestic alternatives to critical imported laboratory equipment and reagents.
• Supports the modernization and outfitting of regional PCR laboratories with domestically manufactured equipment.
• Ensures access to a complete technological solution for molecular diagnostics.

Advantages:
• Proprietary technological developments.
• A broad product portfolio.
• Certification in accordance with international standards.
• Regular and timely supply of reagents.
• Technical support.

LLC «Promedpharm»

Product description: A two-phase peptide-and-amino-acid dietary supplement line called “SILVEROPTIM,” consisting of “Morning” and “Evening” formulations. The products are designed to provide nutritional support for cognitive function, productivity, sleep, and recovery. Digital support includes a progress-tracking diary and reminders to take the supplements.
The company also offers the AretiBoost line of functional products based on components derived from maral deer blood, including ANEMIO, IMMUNO, and VITABIOTIC. Another promising area is the development of functional bars in a convenient format for export markets.

Website: https://promedfarm.ru/about-us/

Problems addressed:
- Declining cognitive performance and productivity during the day.
- Poor recovery and sleep disturbances.
- Insufficient nutrients needed to support immunity and vitality.
- Lack of convenient product formats for active lifestyles and export deliveries.

Advantages:
- Unique proprietary development.
- Proven effectiveness.
- Extensive market experience.
- Strong demand in Egypt, Indonesia, Vietnam, Mongolia, and other countries.

LLC «WARP-DM»

Product description: A workstation for assembling prosthetic leg systems with motors and electronic components.
Brief product overview: The workstation enables the more convenient, faster, simpler, and more accurate assembly of prosthetic leg components into the correct geometric configuration.

Website: https://www.bion-lab.com/

Problems addressed:
- The complexity of assembling prosthetic structures.
- Difficulties faced by people with amputations who wish to lead an active lifestyle and participate in snowboarding and water sports.
- Limited access to reliable prosthetic components in the context of import substitution.

Advantages:
- Leasing options available.
- All required patent and regulatory documentation is in place.
- Technical support for users working with the equipment.
- Competitive pricing.

Sole Proprietor Lyubov Nikolaevna Zakharova

Product description: Ergonomic computer workstations and transforming cyberstations called E-station. Users work in a semi-reclined position rather than sitting, maintaining a more ergonomic posture. The body position can be changed at the touch of a button, helping users avoid prolonged static postures.
When the workstation is transformed, the monitors and peripheral equipment automatically adjust to the user. The station can be customized according to the user's physical characteristics and specific tasks. This approach provides a level of comfort that is difficult to achieve even with the most expensive office chair, while significantly reducing strain on the musculoskeletal system and other body systems.
The product was recognized as an innovation in Moscow following a pilot test.

Website: https://e-station.tech/

Problems addressed:
• Reduces the risk of occupational musculoskeletal disorders and back pain among office employees and gamers.
• Increases comfort and productivity during prolonged computer work.
• Provides an ergonomic alternative to standard office furniture.
• Allows users to alternate between sitting and standing during the day without changing workstations.

Advantages:
• A unique technological solution designed for people with spinal problems and those who spend long periods working at a computer.
• High market demand.
• Short delivery times.
• The possibility of becoming an exclusive buyer.

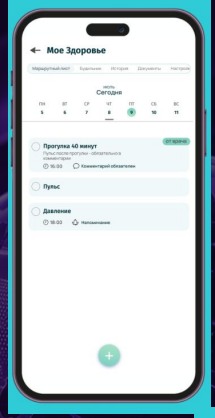

LLC «Health Systems»

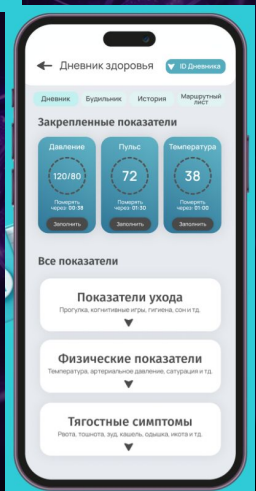

Product description: A health-monitoring and care-management platform for elderly people. Caregivers receive clear, time-based tasks and record health indicators.
Doctors can monitor changes over time, while family members have real-time access to information.

Website: https://системыздоровья.рф/

Problems addressed:
- Monitoring the availability and use of consumable supplies on site.
- Monitoring and controlling the health condition of elderly people.
- Automating record-keeping and control procedures.
- Providing family members with transparent, up-to-date information about the actual health condition of their relatives.

Advantages:
- Proven experience working with major Russian rehabilitation centers, home-care agencies, and nursing homes.
- A complete, ready-to-use system that does not require additional services.
- Fast integration with external financial and logistics software solutions.

LLC «INVIT»

Product description: A wide range of biologically active food supplements (dietary supplements) designed to support health and replenish nutrient deficiencies. The product portfolio includes supplements for gut microbiome support (“MetaBion Active”), throat health (“Throat Extracts: Honey–Sage” and “Honey–Lemon with Lysozyme”), liver support (“AlcoReset”), weight management (“Barberry + Chromium Picolinate”), White Sea algae, and other products.
The company was founded in 1996 and operates its own manufacturing facility in the science city of Korolyov. It holds a sanitary and hygienic certificate for the production of dietary supplements and cosmetic products.

Website: https://invitcosmetic.ru/catalog/bad/

Problems addressed:
• Replenishes deficiencies of vitamins, minerals, and other biologically active substances.
• Supports the health of the digestive system, liver, immune system, and other body systems.
• Offers natural plant-based formulations for everyday health maintenance.

Advantages:
• Own manufacturing facility and laboratory operating since 1996, with more than 1,000 product developments.
• A wide product range, from vitamin complexes to specialized supplements.
• A sanitary and hygienic certificate for the production of dietary supplements and cosmetics.
• Contract manufacturing available upon request.

LLC «MASTER BRAND»

Product description: Liquid humic and fulvic ingredients made from lowland peat for cosmetic product development. The portfolio includes the MB Humic Liquid and MB Fulvic Liquid lines, as well as products available for co-development (MB Humic Cosmetic, MB Fulvic Cosmetic, MB Custom Solution and others). Production site: Armenia. Target markets: Vietnam, Armenia, Kazakhstan and Georgia.

Website: http://www.worldorganica.com

Problems addressed:
- Tailors concentration, pH, color and purification level to the customer's formulation.
- Provides natural peat-based raw materials for rinse-off products, masks, spa and shampoos.
- Supports development from technical brief to commercial-scale batch.

Advantages:
- Natural source: lowland peat as a source of the humic complex.
- In-house production: process control from raw material to finished ingredient.
- Two fractions: humic and fulvic product lines.
- Flexible specifications and pilot batches: laboratory testing before scale-up.
- Industrial packaging (50 L canisters) and technical support.
